

PRIVATE 5G : THE NEXT BIG THING

Bjørn Lydersen

Product Manager 5G, New Business, Telenor Norge

Mobil agenda Mai 12th, 2022

Private 5G networks : The Next Big Thing

Drivers for Private 5G networks

1 Connectivity Constraints

2 Industry trends

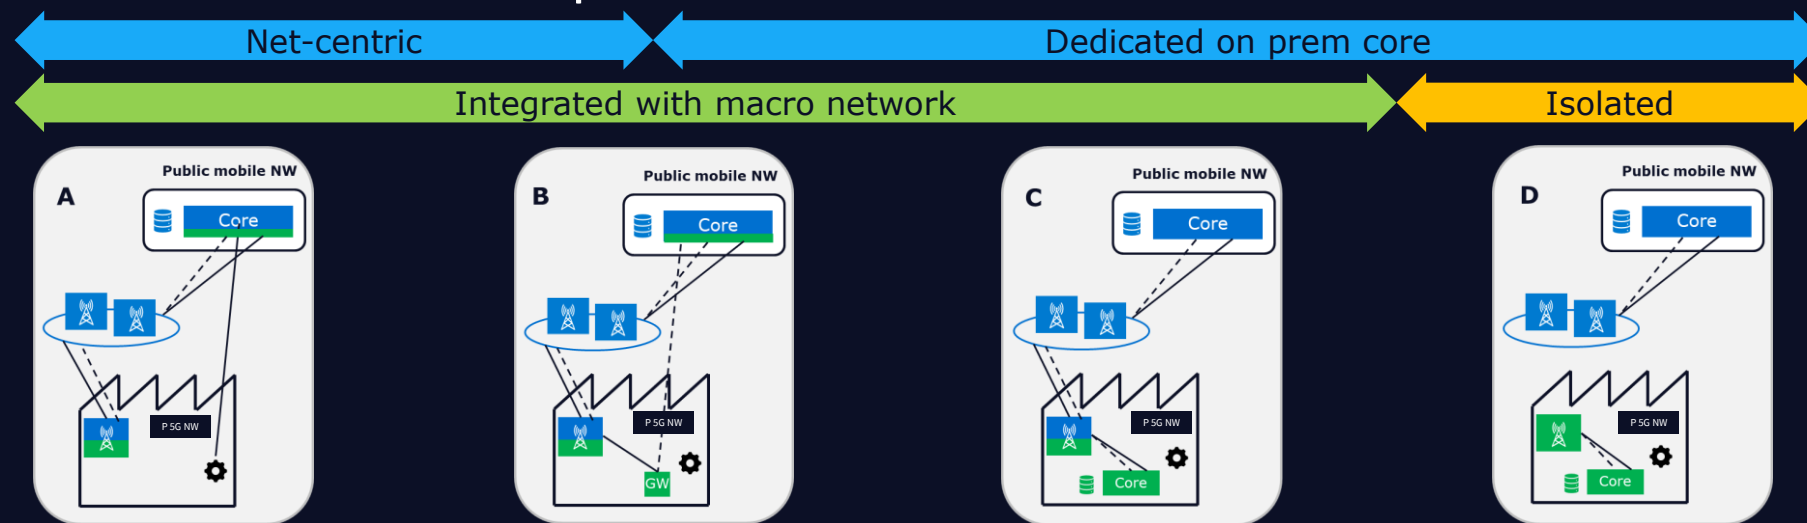

Customer needs and use cases are diverse

– requiring a set of Private Mobile Network options

What to think about:

- Customer need and use-cases
- Integration requirements
- Cost
- Reliability and security
- Isolation requirements
- Local/Edge processing of data and critical applications

	Private Network delivered through public network	Local GW to terminate traffic locally	Full dedicated private network, RAN shared with public network	Dedicated and fully isolated RAN and Core
Dedicate coverage & capacity	✓	✓	✓	✓ ✓
Low latency	✓	✓	✓	✓
Network autonomy			✓	✓
Data stays local		✓	✓	✓
Seamless integration with Telenor mobile network	✓	✓	✓	
Commercial mobile services	✓	✓	✓	

5G innovations

Potential application areas of Industrial 5G

Mobile & portable
assets

Moving & rotating
parts

Wireless
sensors

Human-machine
interaction

Positioning & tracking

Modular production

Retrofit solutions

Network convergence

IT meets OT : Security in private 5G networks is not about frequencies

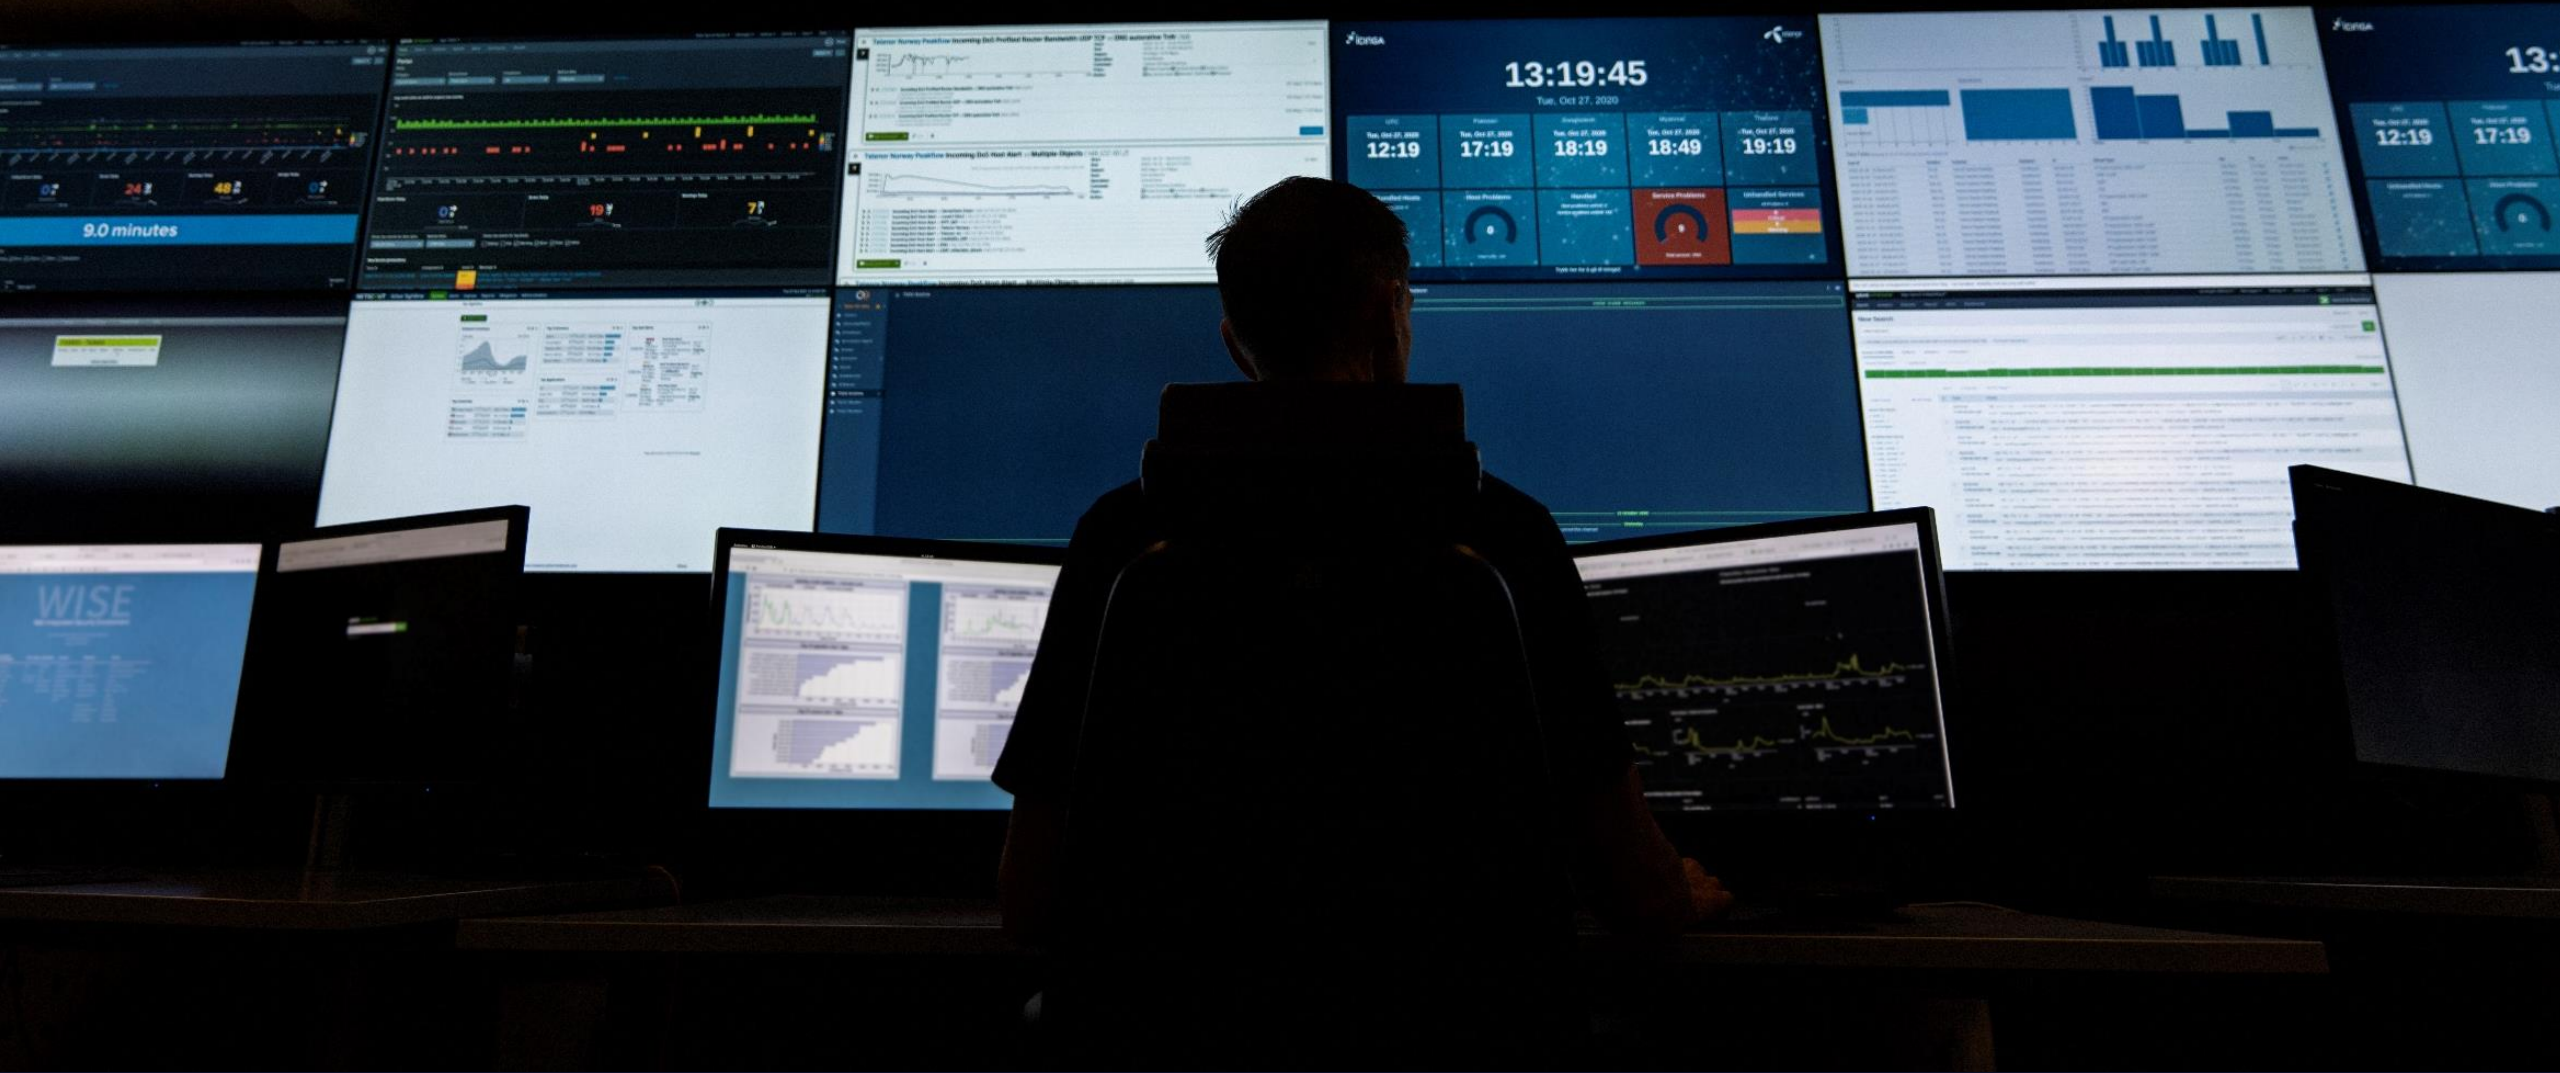

OT is the next step in the business digitalization journey

Security & safety is the key

Linking cyber threats with consequences for the infrastructure is a major challenge

At Telenor, security its in our DNA

OMNY - new cybersecurity-startup

Security competence

Software competence

Industry competence

Omny

A contextualized OT security software, bringing industry closer to omniscience.

The perfect storm

A circular inset image showing a complex industrial facility with numerous pipes, valves, and structural steel, likely a refinery or chemical plant. The scene is dimly lit, with some lights visible on the structures.

IIoT

Industrial IoT and sensors connected collecting the data in real time

A circular inset image featuring a city skyline at night with glowing lights. Overlaid on the image is a network diagram with white lines connecting various nodes, and a blue Wi-Fi symbol is visible in the upper right.

5G

Fast, reliable, low latency and high capacity transporting the data through the network

A circular inset image showing a white humanoid robot in the foreground, slightly out of focus. In the background, a person is sitting on a blue bench. The robot has a blue logo on its chest that reads 'NTM'.

AI

Applications, new analysis and compute methods requires low latency

PRIVATE 5G NETWORKS : THE NEXT BIG THING
