# Session Objectives

- Small Cell Market Drivers
- Small Cell Terminology and Segments
- Small Cell Challenges and Opportunities
- Cisco Small Cell Vision and Products

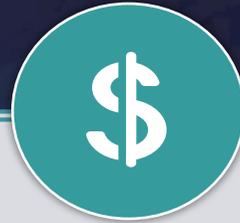

# Overall Small Cell Market Drivers

**Growth in Mobile Data**

**Lack of Spectrum**

**Attractive Economics of Offload**

**Anytime Anywhere Access to Data**

**Increase in Indoor Consumption**

**High growth opportunities are attracting intense competition**

# Enterprise Indoor issues: Oslo example (Press vision)

Nye kontorbygg kvel

MOBILDEKNING INNENDØRS

## Moderne bygg dreper mobildekningen

### Slik får du bedre innendørsdekning

Enten du er bedrift eller privatperson finnes det råd mot dårlig dekning innendørs.

IDA OFTEBRO – 13. juni 2013 10:37

KOMMENTARER (0) 🚗

En kombinasjon av ny mobilteknologi, telefoner med dårligere antenner og i byggeforskrifter gjør at stadig flere av oss opplever dårlig innendørsdekning har flere alternativer for å bedre innendørsdekningen. Er du privatperson er færre, men de finnes fortsatt:

**Glassfasader, miljøkrav og arkitektur skaper hodebry for mobiloperatørene. Nye bygg må utrustes med forsterkende antenner, men ingen vil ta regningen.**

MOBILTRØBBEL: Hele Barcode-prosjektet ved Bjørvika i Oslo er et eksempel på spenstige bygg med rene linjer. For mobiloperatørene kommer ikke disse byggene uten utfordringer. Glassene er belagt med en tynn og usynlig aluminiumsfilm som stopper høyfrekvente mobilsignaler. Foto: Leif Martin Kirknes

# Address Increase Capacity with “Inside-Out” Deployments

## Traditional Outside-In Deployment

20–35% traffic is  
served outdoors

Macro Cell sites  
are scarce

Macro cell sites  
are costly  
\$\$\$

## Inside-Out Deployment

65–80% usage  
is now indoors

Users are  
well-served

Small Cell  
costs are low  
\$

# Small Cells: Evolving Terminology to Match Demand

Location >	Indoor			Outdoor	
	Home	Enterprise Office, campus, hotel	Urban City centres	Rural	

## Before the mobile data revolution

Primary driver >	Coverage extension and end user experience	Voice coverage	Coverage and capacity	Voice coverage
Old name >	Femtocell	Picocell	Microcell	

## After the mobile data revolution

Primary driver >	Coverage extension and end user experience	Coverage (voice and data)	Data capacity	Data capacity	Voice coverage
New name >	Femtocell	Enterprise Small Cell	Metro SC Indoor	Metro SC Outdoor	Rural Small Cell

# Vision on Small Cell technologies

Radio type	3G	LTE	Wi-Fi
Technology			
Spectrum	Dedicated/ Owned	Dedicated/Owned	Shared
Voice	Yes Integrated	Yes integrated	Limited OTT
Mobility	Yes	Yes	Limited

+

Throughput Per cell	DL 20Mbps UL 10Mbps	DL 100Mbps UL 50Mbps	DL 500Mbps UL 500Mbps
Device support	Phone 90% Tablet 10% PC 5%	Phone 5% Tablet 1% PC 5%	Phone 90% Tablet 100% PC 100% TV, STB, bulb etc
Multi operator/ Guest access	Limited	Limited	Yes

# Barriers to Small Cell Deployment

Multivendor HetNet

# Small Cells Challenges and Opportunities

## Residential

- Zero-touch installation
- Self-healing
- Self-configuration

## Enterprise

- Wi-Fi like installation
- Interference mitigation
- Self-configuration
- Self-optimization
- Small Cell co-ordination (Grid)
- Active Mobility
- Wi-Fi integration

## Venue

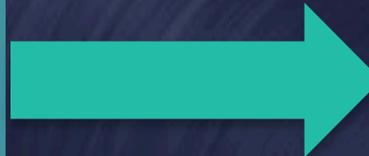

- Wi-Fi like installation
- Co-ordination with Macro
- Self-configuration
- Self-optimization
- Load-balancing and capacity management
- Enhanced Mobility
- Wi-Fi convergence

# Consider New Valuation Strategies

## Large Enterprise / Venue

### *Net Cost*

- Most deployments financed by the SP
- Primary objective is retention of enterprise account (mobile lines)

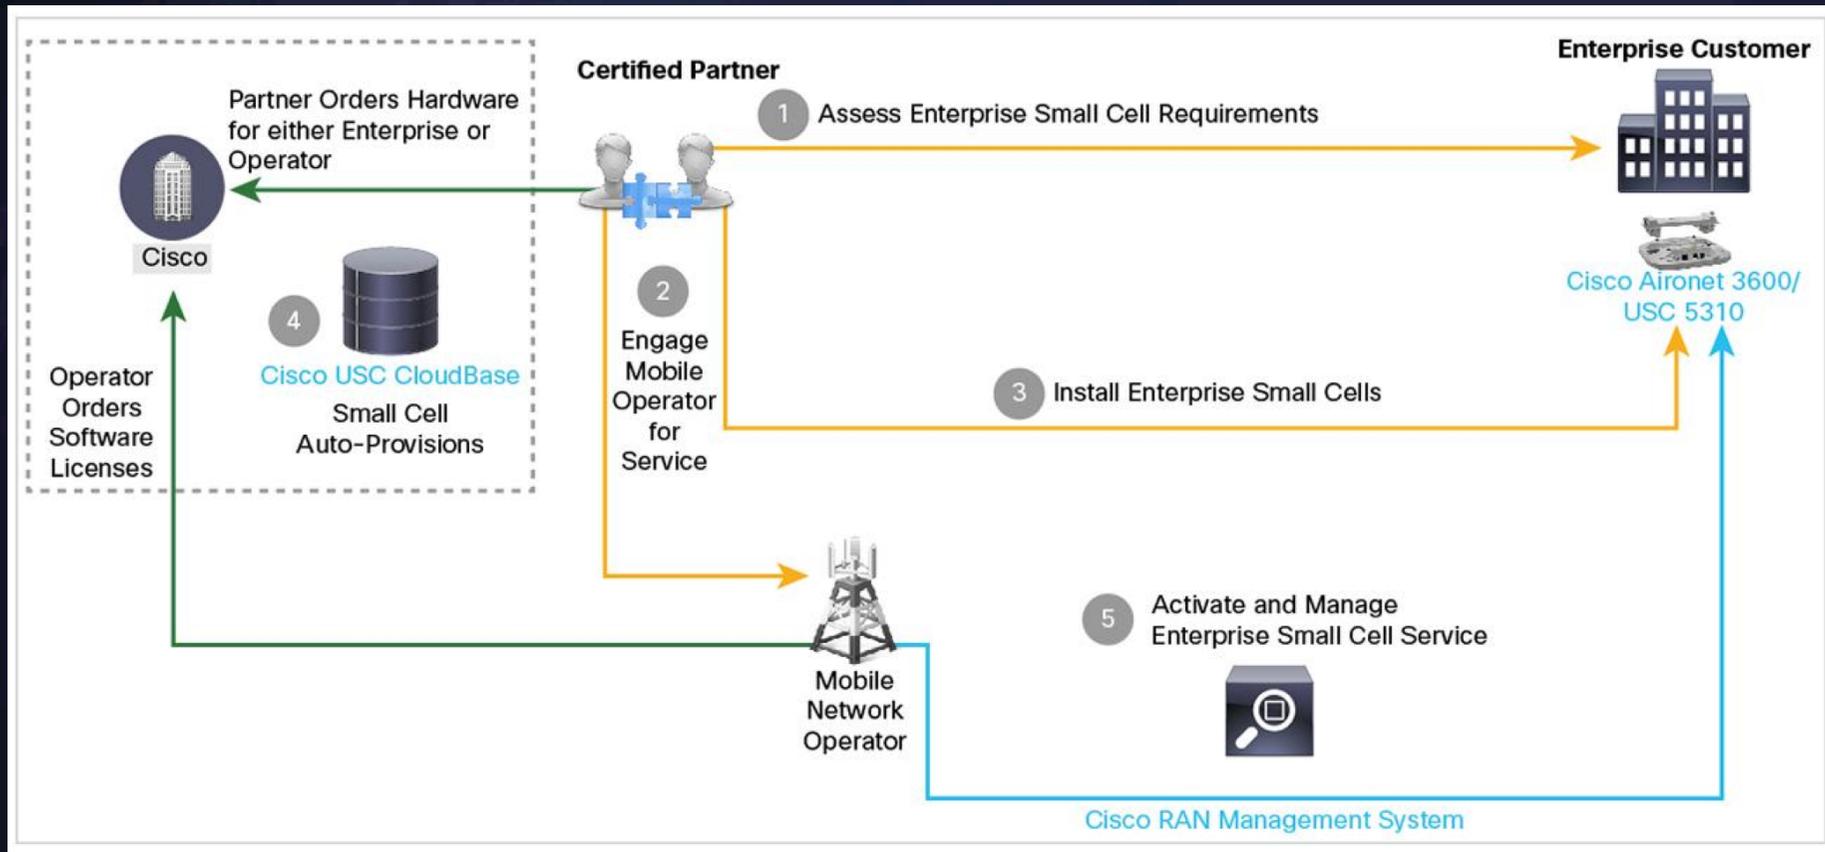

## SMB & Satellite Offices

### *Net Gain*

- Margin on sale of hardware, installation and managed service
- Reduce churn
- Improve ARPU (increased usage)

# New model of Small Cells go-to-market

# What is the Killer App for Enterprise Small Cell?

- VOICE

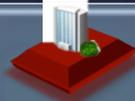

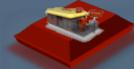

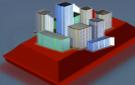

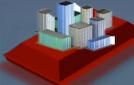

- VOICE

- VOICE

## Beyond voice:

- Data
- Location services
- Cloud managed IP PBX
- Emergency services
- Employee services
- Guest services
- And more...

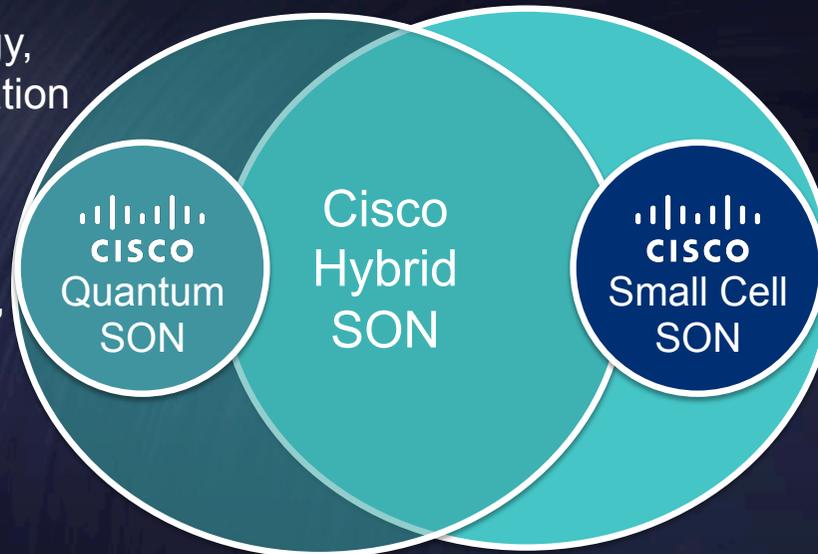

# Cisco Small Cell Product segments

	 RESIDENTIAL	 SOHO	 ENTERPRISE	 HOTSPOT	 VENUE	 Concourse	 Outdoor
POWER	7-13dBm	13dBm	20dBm	20dBm	20-24dBm	24-33dBm	33-37dBm
USERS	4 Users	8 Users	16 Users	16 Users	16-32+ Users	32-64 Users	>64 Users
ACCESS	3G/LTE – Closed	3G/LTE-Closed/Open	3G/LTE Open + Wi-Fi	3G/LTE Open + Wi-Fi	3G/LTE Open + Wi-Fi	3G/LTE Open	3G/LTE Open
DEPLOYMENT	Single Unit	Single unit	1 – 10+ units	1-3 units per site	10s units per venue	1 -10 units per macro sector	1 -10 units per macro sector
							

# Cisco SON Differentiation

Best of Breed Orchestrated for Most Mature and Complete SON in Industry

- Multi-vendor, multi-technology, multi-layer Het-Net orchestration
- Automated closed-loop optimization
- AP SON orchestration
- Small cell/macro integration, including shared carrier

- Dynamic real-time optimization and self-healing
- Measurement-based adaptiveness
- ActiveSON for peering among small cell groups
- Scalable, simple installation experience – just like Wi-Fi

- Instant AP deployment with auto planning, initialization & optimization
- Enhanced mobility, reduced interference and effective macro offload
- Smart SON agent in AP orchestrated by Quantum SON
- Optimal Het-Net Quality of Experience

Thank you.
